

virtual_penalty_intimator can be integrated with various applications

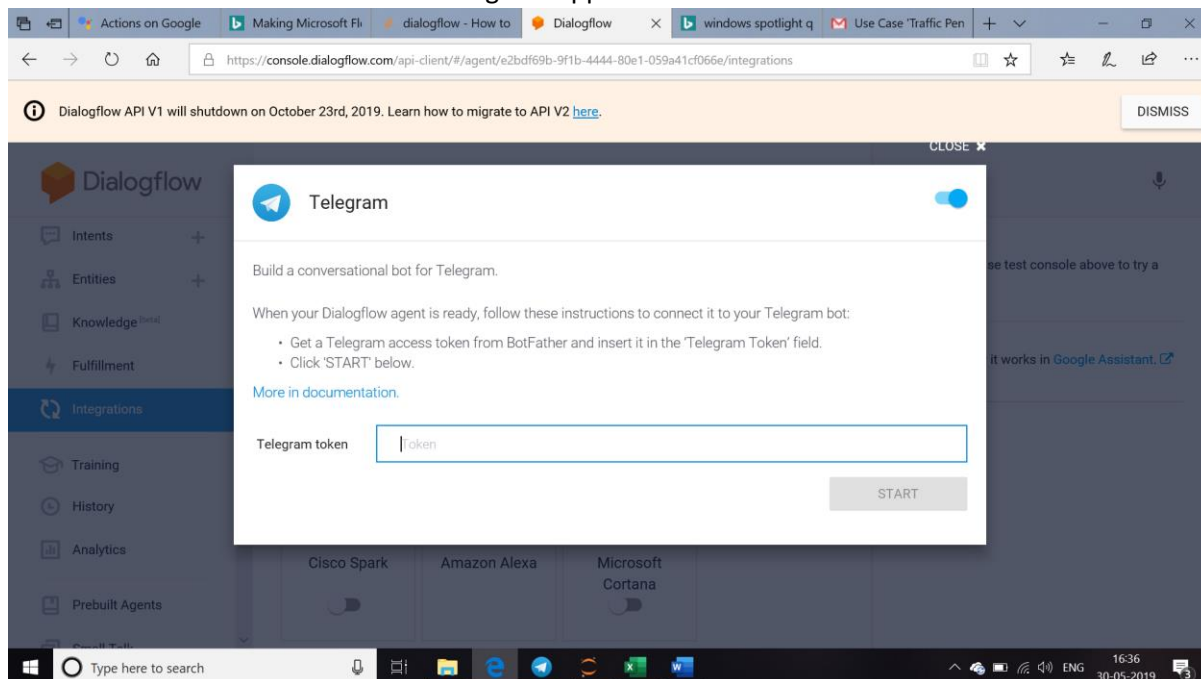

Lets make our bot integrated with telegram

In the dropdown arrow click **Integrations** as shown

These are the various platforms in which a bot can be integrated

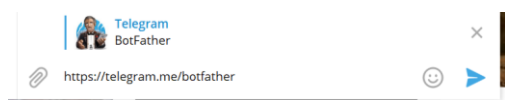

slide the slider available within the Telegram App as shown above

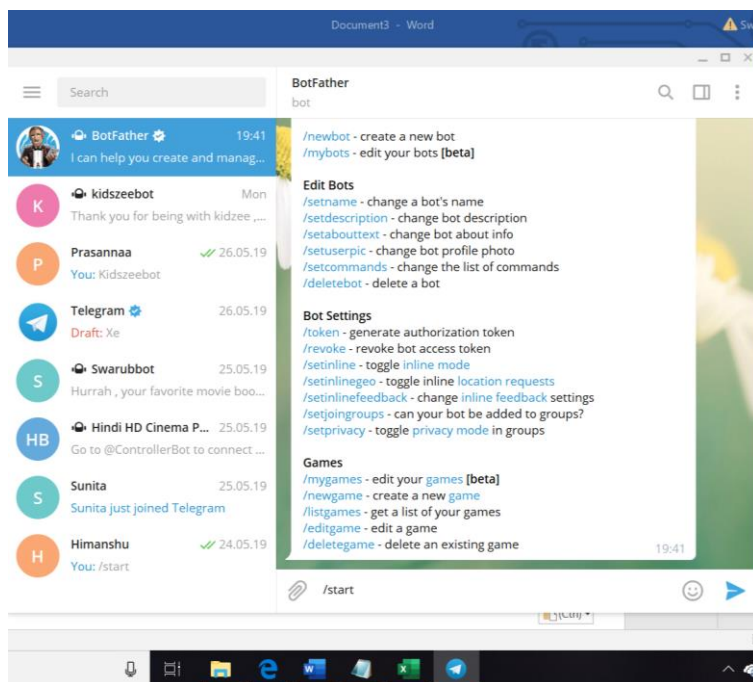

This is the Next screen which enables us to actually integrate with the telegram app , with empty Telegram token

Next in your Telegram paste the link as <https://telegram.me/botfather> as shown below

A new bot named bot father will be enabled

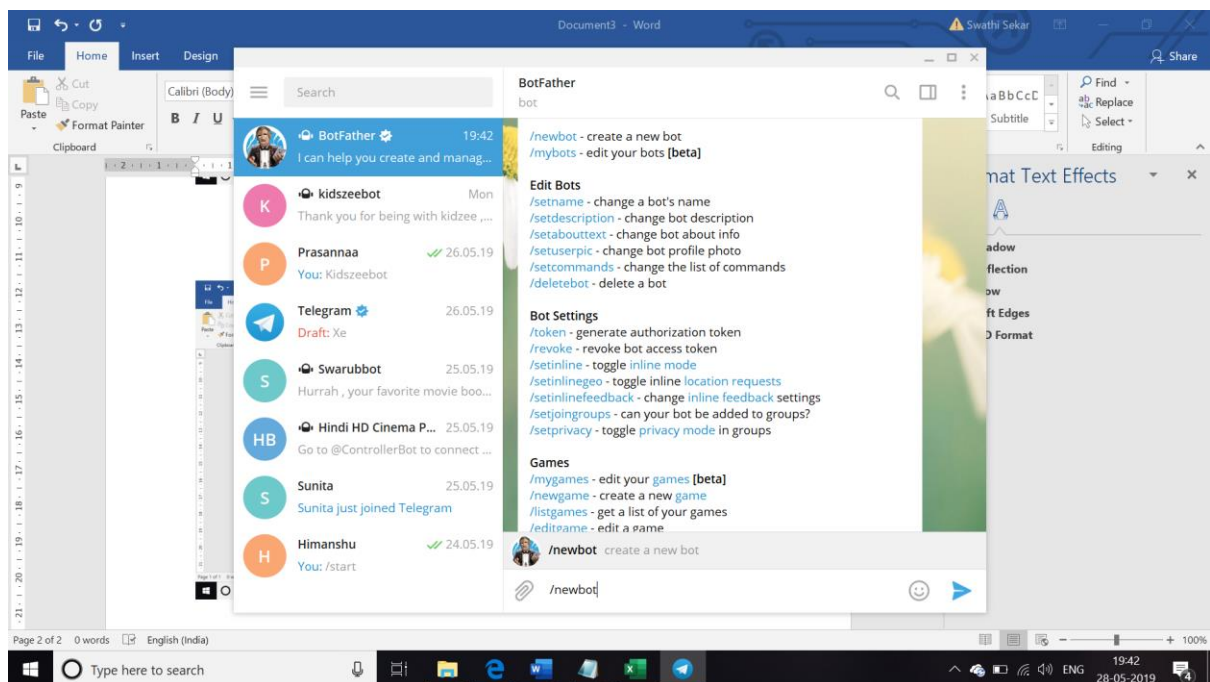

In the same screen type **/start** to start a new bot as below

It displays a list of commands .

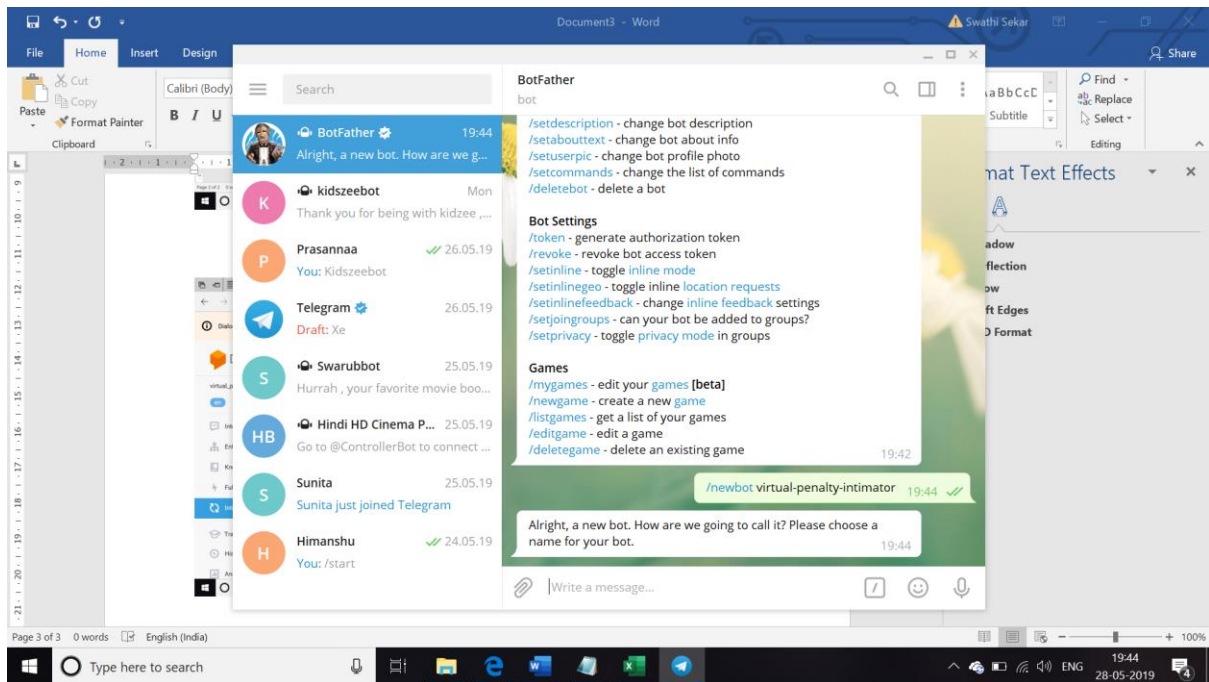

Now the new bot should be given a name , type **/newbot < any name for the bot>**

In this case type **/ newbot virtual-penalty-intimator** as shown below

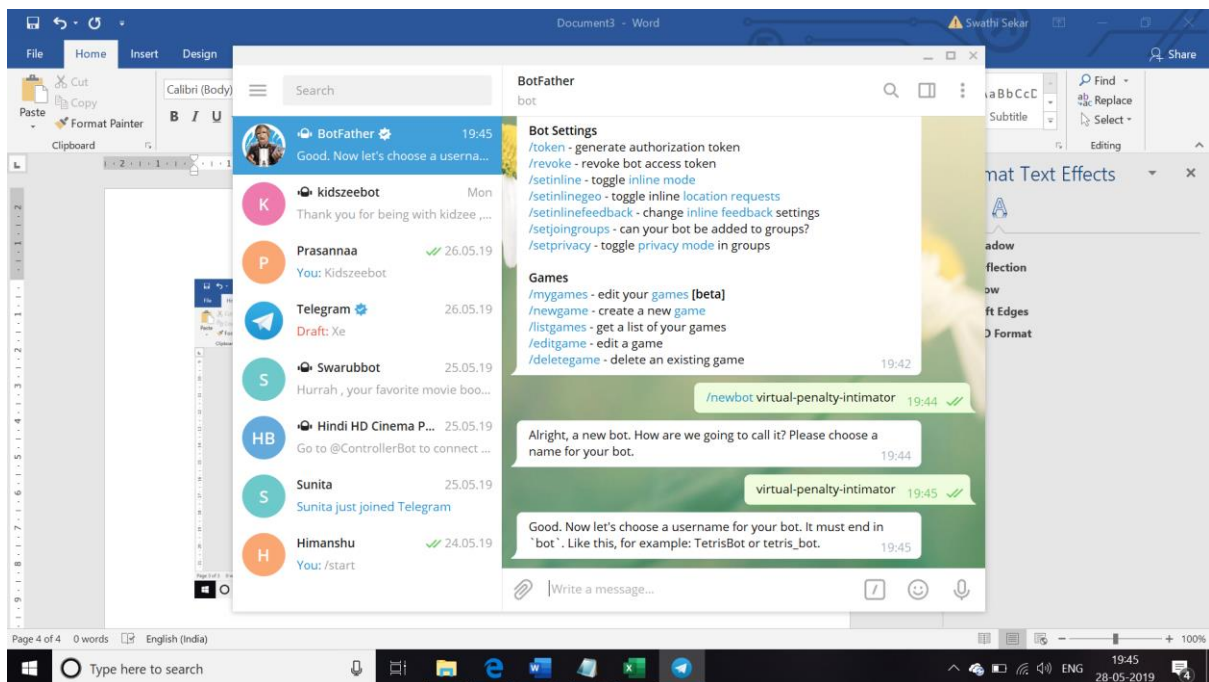

Once done, It will pop up with a message as shown below

It once again prompts for the bot name to be entered

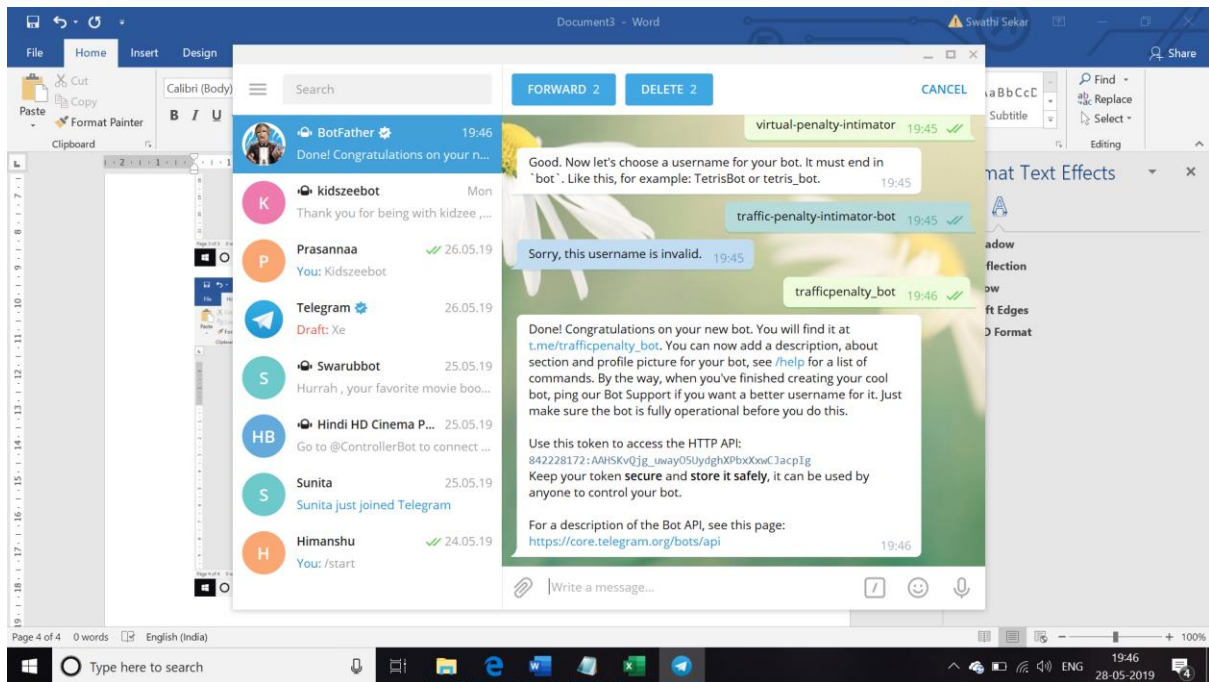

Once again , the same name can be given for simplicity.

It pops up with the message as shown below

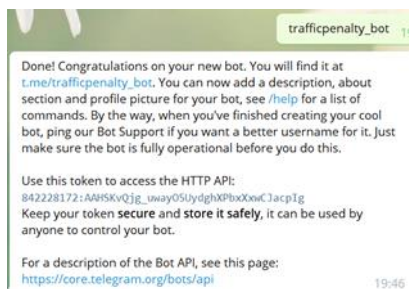

This time the name is suffixed with bot

The name given is trafficpenalty_bot as shown below

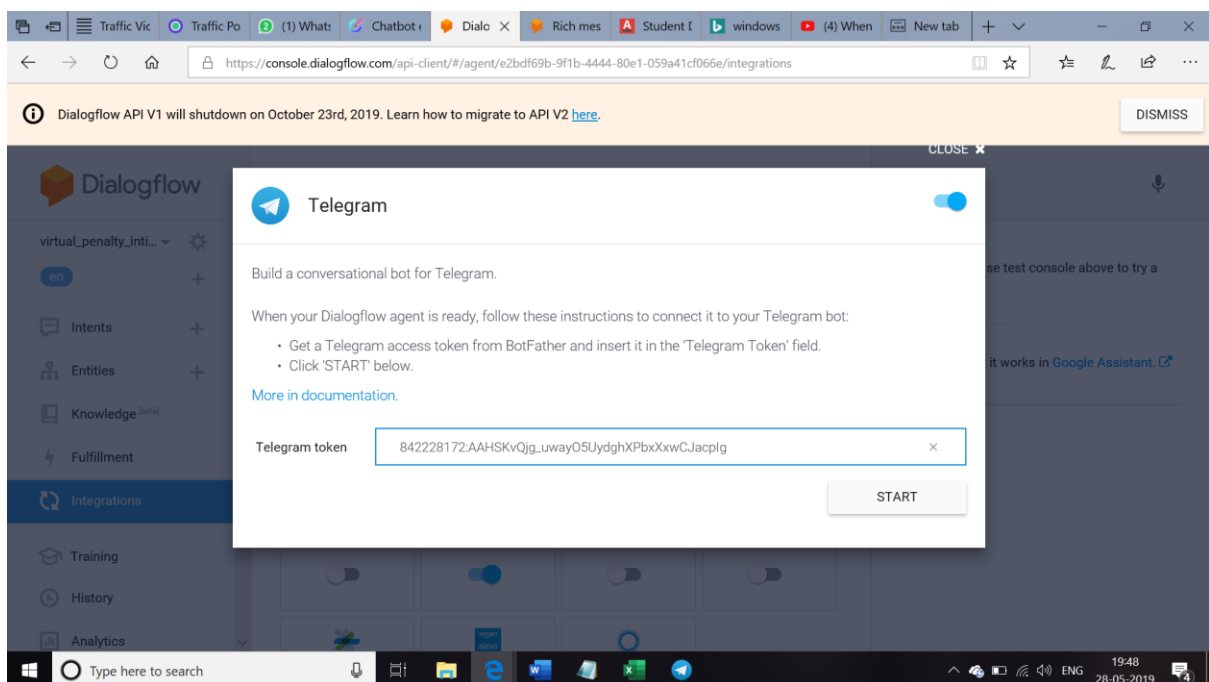

The name should be unique to get the Congratulations message

In this Congratulations message if watched closer

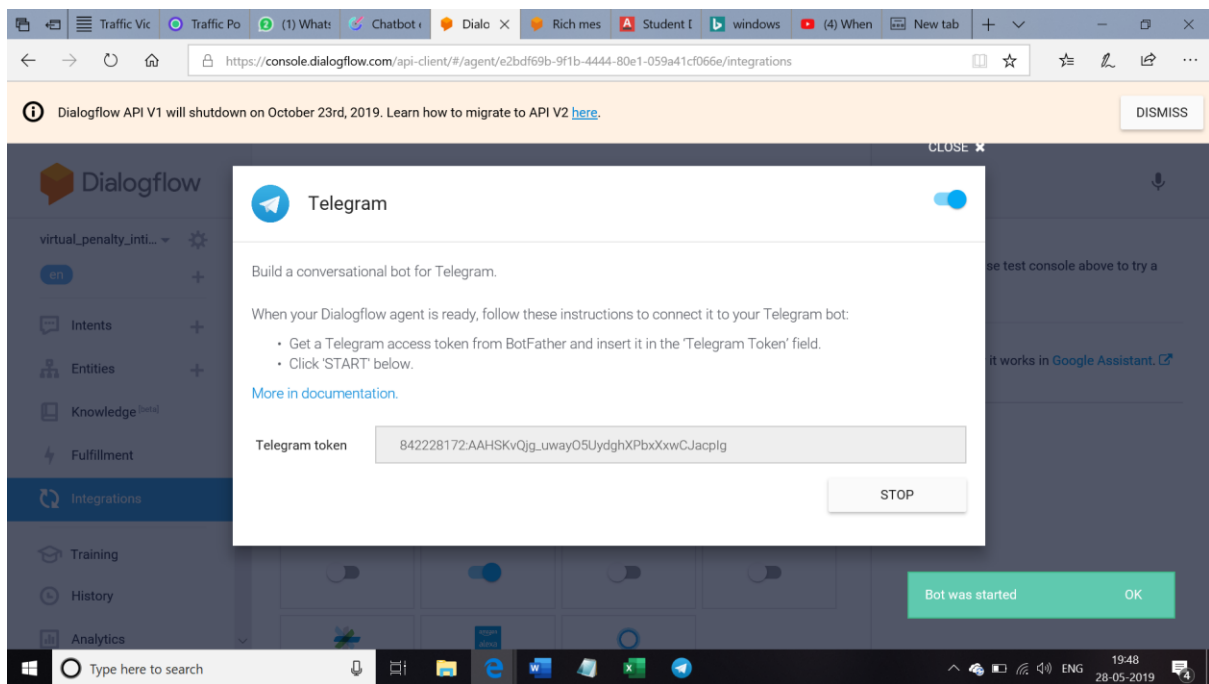

Use this token to access the HTTP API is found ,each time this token differs.

Copy and paste it in the telegram token as shown

After this setup after some time a message pop_up conveying that our bot was started as shown below

Now trafficpenalty_bot can be searched within the telegram and the entire conversational flow can be enjoyed.
